---

**Research Group:** GREF – Groups Research Economic Finance

---

### Research Interests:

- Asset Pricing
- Institutional Investors
- Sustainable Finance
- Machine Learning
- Textual Analysis

---

### Short Bio:

Maosen Wang is a Ph.D. candidate in the Department of Economics, Finance and Accounting at Esade Business School. He holds a MSc. in Economic and Finance from Centro de Estudios Monetarios y Financieros (CEMFI), a M.Sc. in Mechanical Engineering from Sungkyunkwan University, and a B.Sc. in Mechanical Engineering from Dalian University of Technology. Before pursuing an academic career, he was an investment manager at Beijing Automotive Group in China.

His research interest sits at the intersection of empirical asset pricing and corporate finance, with applications to institutional investors, supply chain, and ESG. He is particularly interested in understanding how complex, hard-to-process information gets incorporated into market prices. To do so, he employs large-scale textual analysis and machine learning on datasets like earnings call transcripts, alongside high-frequency market data from options and credit default swaps.
